Implemented bug fixes:

1. *OS X 10.10 License Agreement and Readme issue.*
Due to changes in OS X 10.10, license agreement and readme file were always shown in Portuguese language, regardless of chosen UI language.
Status: Fixed.
2. *OS X 10.9 and 10.10 Print Dialogue Extension (PDE) corruption.*
Background: Apple has introduced a new security layer ('sandbox') in OS X 10.9 and OS X 10.10. This security layer restricts the available features of KYOCERA OS X drivers which are installed on these systems by preventing the PDEs from being loaded. Features like Finishing, Watermark or Job Accounting are crossed through; selecting them will generate an error message.
For earlier OS X drivers, KYOCERA has already released a patch tool that corrected this issue.
Status: Fixed. The new driver version 3.2 (11-2014) uses sandbox-compatible PDEs, all features are available right after driver installation.
3. *User interface corruption when selecting a PDE for an open Microsoft Office file.*
Vertical stripes or blank areas in the user interface can occur when printing from Microsoft Office for Mac and selecting a PDE feature like Finishing, Watermark or Job Accounting.
Status: Fixed
